SUMMARY

Product Manager with roots in Software Engineering and ML Research. Experienced in taking agentic AI workflows, RAG-based systems, and data platforms from 0-to-1 to production at Hive, Google, and Oracle, translating complex user workflows into intuitive product experiences that improve decision-making, unlock new use cases, and scale across diverse customer segments globally.

PROFESSIONAL EXPERIENCE

Product Director, Hive Financial Systems

8/24 – 4/26

- **0-to-1 AI Platform Product:** Defined product vision and owned roadmap for an agentic optimization platform to prescribe weekly capital deployment, architecting real-time pipelines across 350 vendors and 10 teams, achieving 98% cashflow forecasting accuracy, 15% increase in portfolio returns (\$9MM) and 5% reduction in cost per funded dollar (\$3MM)
- **New Product Development:** Designed and launched shorter-duration product lines with differentiated pricing across a \$60MM portfolio serving 200K+ customers, improving capital efficiency by 44% (2.7x to 3.9x) and customer LTV by 19%
- **Data-driven Decision Making:** Drove product-led growth by architecting a unified analytics platform integrating multi-source data across investor journeys, tracking leading indicators (engagement velocity, conversion) and lagging metrics (time-to-close, AUM growth) to surface funnel efficiencies, driving a 10% YoY increase (\$5MM) in annual capital raised
- **Product Experimentation:** Validated build approach for a reporting product through iterative experimentation (Lovable to Replit to Fabric agents), establishing eval-driven readiness criteria based on cost and scale, reducing time-to-insight from days to hours
- **Customer Journey Optimization:** Reduced customer churn and defaults by analyzing payment behavior data to identify high-risk segments, designing targeted communication and messaging strategies with call center teams, increased collections recovery by \$85K/month (20%) and improved customer satisfaction (Trustpilot 4.1)

Product Consultant, Home Depot

1/24 – 5/24

- **Customer Experience & Returns Optimization:** Analyzed large appliance return data, developed product specification standards for site readiness, and built AR buying guides to help customers validate fit pre-purchase, projecting \$2MM in annual savings

Product Technology Manager MBA Intern, Google

5/23 – 8/23

- **Product-Market Fit:** Led competitive analysis of the LLM and cloud AI platform landscape in the clinical AI domain (35+ user interviews, 10+ customer validations) to identify 6 Generative AI opportunities, authoring an executive-ready market brief that secured VP buy-in for 3 prioritized MVPs, projected to grow PaLM API (now Gemini API) share from 18% to 25% within a year
- **AI Product Development:** Prototyped a multilingual RAG-based QA inference pipeline (PaLM API + LangChain) to upskill community health workers, experimenting with document ingestion, chunking, and validation, improving answer relevance by 52%
- **Go-to-Market Strategy:** Led Bard (now Gemini) compliance launch across 27 EU markets, automating account withdrawal flows to avoid \$3.6B in fines (~4% of Alphabet's revenue) and transitioned ownership to support, saving 5+ engineering hours per week

Senior Applications Engineer, Oracle

10/20 – 3/22

- **Cross-Functional Collaboration:** Led end-to-end product delivery for 45 features shipped to 1000+ enterprises globally, driving cross-functional execution across Engineering, UX, and QA, reducing client costs by 32% and increasing retention by 60%
- **Customer Insights & A/B Testing:** Resolved 300+ customer pain points through BI analysis and on-call support, led Mobile UI transition for 800 enterprises with 80% of features validated through A/B testing, increasing product adoption by 24%
- **API Integration Product:** Architected and shipped Oracle's Connector Framework enabling enterprises to connect any external application to Oracle Cloud without custom engineering, reducing onboarding time by 22% while establishing IAM guardrails

Applications Engineer, Oracle

7/18 – 9/20

- **Product Ownership & Agile Management:** Instituted agile documentation process across a 35-person team using Confluence, enabling feature tracking, accountability, reducing technical debt from 55 to 1 open issue (98%) in a product-wide bug challenge
- **Process Optimization:** Identified bottleneck in the product testing pipeline, proposed a solution and obtained buy-in from Director to develop and implement ETL templates for same day testing. Reduced product testing time by 60%, ensuring on-time releases

EDUCATION

Carnegie Mellon University - Tepper School of Business, MBA

5/24

International Institute of Information Technology, Hyderabad, MS (Thesis) in CS

7/20

International Institute of Information Technology, Hyderabad, BTech (Honours) in CS

7/17

ADDITIONAL INFORMATION

- **Technical Skills:** SQL, NoSQL, Python, Spark, Tableau, Power BI, JavaScript, JIRA, Claude Code, Cursor
- **Research:** Presented at 6 international conferences and published in 4 journals on ML, large-scale Data Analytics (Citations: 92)
- **Certifications/Licenses:** Certified Scrum Product Owner (CSPO), Certified Scrum Master (CSM) by Scrum Inc (2024)
